

Amyloidosis Research Consortium

Clinical Fellowship Program

Overview

Background

The Amyloidosis Research Consortium's (ARC) Clinical Fellowship program supports the education and development of amyloidosis specialists with the aim of growing the base of clinicians who can provide expert care and lead scientific advances. The program funds academic centers to build the skills and expertise of an amyloidosis clinician-researcher over a one-year period.

The program will enhance the ability of the trainee to integrate multidisciplinary collaboration, build advanced expertise, participate in research, promote health equity, and foster innovation in the diagnosis and management of amyloidosis.

The fellow should be 75% clinical practice and 25% research focused.

Eligibility Criteria and Funding

The ARC Fellowship Program is open to established amyloidosis centers in the United States to support the training of promising MD/DO fellowship applicants.

ARC will award up to ten one-year fellowships for a maximum of \$123,600 each for fellow support. Each fellow will be awarded an additional sum of \$4100 to participate in at least two training opportunities (conferences, coursework, etc.). No indirect or overhead costs may be claimed. Funding will be released every two months throughout the fellowship period.

ARC will also seek opportunities for fellows to network at key meetings/conferences, as well as participating in the annual [Amyloidosis Forum](#).

ARC provides funding directly to qualified centers which will be responsible for identifying the most competitive fellowship candidates. Once fellowship candidates are selected, their credentials will be submitted to ARC for review. After the fellow has been reviewed by ARC, the fellowship agreement will be shared. Funding will be distributed every two months following agreement execution, prior to the start of the fellowship.

The fellow selected by the mentor must hold an MD, DO or equivalent degree, be licensed to practice medicine in the United States (and in Canada for Canadian sites) and plan on practicing medicine in the U.S. following the fellowship (and Canada for Canadian sites).

US citizenship is not required either for mentors or fellows. Both the mentor and the fellow must be licensed to practice medicine in the U.S.

This fellowship will be open to physicians that have completed or will be completing a residency in neurology, fellowship in Cardiology, Hematology-Oncology, or Nephrology.

Fellows must be newly selected and not previously enrolled in similar programs.

Individual fellows are not eligible for this funding but are encouraged to inform institutions about this opportunity.

Evaluation

Amyloidosis center applications will be evaluated on the following criteria:

- Academic institution with established amyloidosis expertise and fellowship program, capable of providing a comprehensive, multidisciplinary training experience.
- Demonstrated excellence in amyloidosis care and research with multidisciplinary team capabilities
- A dedicated mentor who is actively involved in the training program
- Commitment to support a fellow with the necessary resources and opportunities for a comprehensive training experience
- Leadership in promoting and integrating an equitable and diverse environment for clinical care, research and education through training opportunities for the fellow
- Competence in delivering care that addresses the holistic needs of patients affected by amyloidosis

Review Process

- An external review panel and ARC staff will evaluate applications based on the overall quality of the fellowship program, including the effectiveness of training, mentorship and achievement of learning objectives.

Reporting

- Fellows and their mentors are required to provide a quarterly report of the fellowship training experience and a financial report of expenditures. An overall year-end report will be due 30 days after the completion of the training program. Reporting forms will be provided by ARC.

Key Dates/Milestones

- | | |
|--|----------------------|
| • Applications Open | July 1, 2025 |
| • Deadline for Center Applications | October 15, 2025 |
| • Committee Review Complete | Mid-November 2025 |
| • Notification to Applicants | December 1, 2025 |
| • Awarded Centers Identify Potential Fellows | May 2026 (or before) |
| • Fully Executed Agreements Due | May 31, 2026 |
| • Fellow Start Date | Summer 2026 |
