

# YOUR IMPACT AT WORK

Milestones from ARC in 2025

At the **Amyloidosis Research Consortium (ARC)**, every milestone we reach begins with your support. From advancing innovative research to training the next generation of specialists, your generosity fuels lasting change for patients and families.

## COLLABORATIONS TO DRIVE NEW THERAPIES

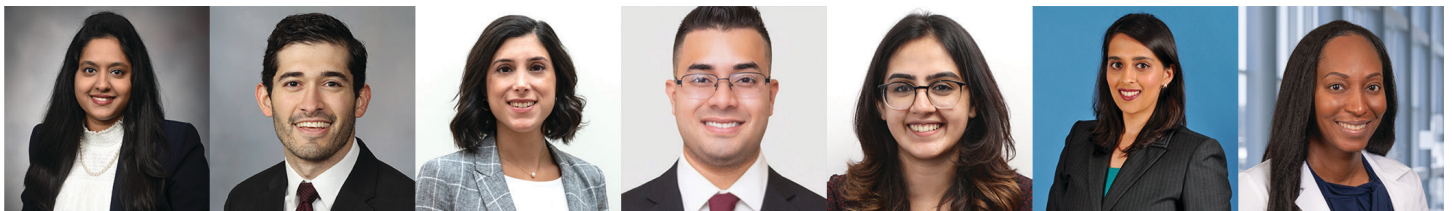

ARC formed the **Amyloidosis Forum** to bring together researchers, clinicians, drug developers, and government regulators, including the U.S. FDA, to speed the approval of new and better treatments for amyloidosis. The Forum unites experts who work together year-round to improve clinical trial design and accelerate the path from discovery to patient care.

This year's hybrid meeting, held at the FDA campus in Bethesda, Maryland, drew over 300 participants: the largest number in the Forum's history. Each collaboration and idea shared helps ensure that promising therapies reach patients faster, improving care and outcomes around the world.

## FUELING THE NEXT GENERATION OF EXPERTS

This year, ARC launched its first **Clinical Fellowship Program**, welcoming an inaugural class of seven fellows. Each physician is beginning a journey that will shape not only their own careers but the future of amyloidosis care. Guided by premier amyloidosis experts, they will learn to deliver exceptional clinical care, build bridges across specialties, participate in groundbreaking research, and advance health equity.

The true impact will be felt for decades through every patient they treat and every discovery they make. By increasing the number of amyloid experts, we can improve diagnosis, treatment, and care for patients everywhere.

## UNDERSTANDING & IMPROVING PATIENTS' EXPERIENCES

Each year, **ARC's Amyloidosis Community Survey** captures the real experiences of patients and caregivers to help shape research and guide care.

The findings are shared globally — informing new therapies, influencing clinical trial design, and improving care practices. ARC ensures that the needs and experiences of people living with amyloidosis are always at the center of progress.

**Your support makes all of this possible. With your partnership, ARC continues to advance care, accelerate research, and improve lives every day.**

Thank you for being part of this journey and for helping bring hope to those affected by amyloidosis.
